The TransIT Solutions TransView 4 Color Status LED is versatile, reliable, and ideal for bus and rail installations. When coupled with one of our mobile Digital Video Recorders (DVRs), the TransView Remote Status LED will enable immediate system status updates without direct access to the Verint mDVR. The TransView 4 Color Status LED has four built-in LEDs. It offers status lights for Power, Video Lost, Manipulation, and Error Statuses. The 4 Color Status LED is an independent device (external to the DVR), which allows it to be mounted independent of the DVR in an appropriate location near the driver or front of the bus for easy viewing.

The TransView 4 Color Status LED - when combined with TransIT Solutions' wide range of recorders, cameras, and other accessories - provides a comprehensive digital video surveillance solution that helps transit agencies protect passengers, protect property, and reduce frivolous lawsuits

12 Volt Input @ 18mAmps per LED

600 mcd LED typical brightness

RJ-45 Connector for easy install

5.0" x 1.5" X 0.7" Metal Enclosure
